

Turn heart failure into heart success.

Why choose Barostim?

Proven therapy.

Barostim is FDA-approved and has been shown in clinical studies to safely improve symptoms of heart failure and quality of life for patients.

Safe and simple procedure.

The procedure typically takes less than an hour, and you'll probably go home the same day.

No hardware in the heart.

Barostim is the only heart failure device therapy that does not require any hardware in your heart or blood vessels.

Routine follow-ups.

Your doctor will schedule routine follow-ups to ensure the device settings are optimized to best improve your heart failure symptoms.

Safely improve symptoms.

Barostim has been shown to safely improve symptoms of heart failure and your quality of life.

Walk farther¹

+60
Meters

Barostim patients were able to walk 60 meters (about 65 yards) farther in 6 minutes than patients on medications alone.¹

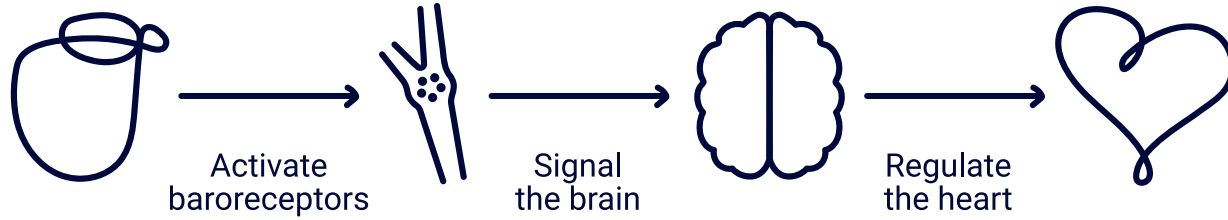

Feel better¹

3x

Barostim patients had 3 times greater improvement in quality of life scores than patients on medications alone.¹

How Barostim™ therapy works.

Barostim is a simple and implantable device that works by stimulating baroreceptors – natural sensors in your body that tell the nervous system how to regulate heart, kidney and vascular function. These effects reduce the heart’s workload and help it pump more efficiently, helping to relieve the symptoms of heart failure.

Can you get Barostim?

Diagnosed with heart failure

You have been diagnosed with heart failure and your heart has an “ejection fraction” (a measure of how much blood your heart pumps) of 35% or less.

Prescribed heart medicine

You are receiving heart failure medications prescribed by your cardiologist.

Symptoms impact your daily life

Despite the medications that you are taking, your symptoms significantly impact your daily life and reduce the activities that you are able to do.

Barostim is not right for everyone. Talk to your doctor about risks, benefits and expectations associated with Barostim therapy. Risks associated with the surgical implant procedure are similar to those from implanting a pacemaker. Patients implanted with the device are anticipated to be exposed to operative and post-operative risks similar to related surgical procedures involving the neck and chest. For a complete listing of all risks and benefits, please visit www.cvr.com/benefit-risk-analysis

CAUTION: Federal law restricts this device to sale by or on the order of a physician.
